# schedule IT

Create building schedules quickly, easily and effectively.

Information Technology can seem to be extraordinary complex. But, getting IT to work effectively for your business needn't be a complicated task. You simply need to know people who inspire the confidence to deliver the right integrated solution, today and tomorrow.

# schedule <sup>↑</sup>IT

**schedule <sup>↑</sup>IT** is a new program written solely for specifiers of architectural hardware. The onscreen format immediately places specifiers on familiar territory using 'architectural speak' and not software jargon to arrive at a detailed door by door hardware schedule.

With more freedom and flexibility to create options, **schedule <sup>↑</sup>IT** then allows your final specification to be formatted in a variety of ways, ready for presentation. Whether you choose a Microsoft Word or Excel document, or even an online pdf, the program will include a covering letter, schedule and summary, set index, set summary and so on, providing your client with a detailed analysis of the project.

**schedule <sup>↑</sup>IT** utilises the storage of "favourite products and sets" as well as "favourite schedules" for recurring projects. Additionally you have the option of integrating the package with recognised account management systems like Sage and Pegasus, providing a seamless management system from schedule through to invoice and profit analysis.

**schedule <sup>↑</sup>IT** uses an added value structure that puts the specifiers knowledge into sharp focus, allowing for quick, professional and accurate response to the ever increasing demands of the industry.
